Summary

This is an ice scraper with an ice breaker option.

4.23 hrs

1 pcs

0.20 mm

0.40 mm

PET

53 g

Prusa MINI /
MINI+

[Hobby & Makers](#) > [Automotive](#)

I designed this ice scraper because I wanted something I could use to scrape and break the ice off your car windows. This is a combination scraper, breaker. It's angled to separate the scraper from the breaker. The angle also helps hold the scraper at an optimum position. I printed it out of PTEG, but you can experiment with other materials. I'm going to try Polycarbonate as soon as I can get some. I printed it on my Mini. I have an MK3S also that I'm going to use to print a bigger version of this scraper. I finally got a chance to use it and it works as I expected. Scrapes ice really well. Better than the junk I bought in the past.

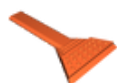

Update: I added more scrapers. More models that's easier to print and gives you a place to put your hand while scraping your windshield. No supports required. That's Scraper 1000's. Also name change. I call it the Bulldozer.

Update: I added a beast of a scraper. This one's pretty hefty. I printed it out of PETG which is best for outdoors and ice. The small ones handle thin ice and some thick ice too, but the big one will handle thicker ice.
