Summary

A loop tyer is used to consistently create the same size loops.

[Hobby & Makers](#) > [Tools](#)

If you're looking to tie perfect loops that are always the same size, look no further. This tyer allows you to consistently create loops that are 8, 10, 12, or 15 mm in size.

I printed in PLA because I prefer to tie up a bunch of snells at home, so I'm not having to do it while trying to catch fish, but PETG should be good as well if you want to bring it with you.
