Summary

SSD holder with m3 mounting holes

[Gadgets](#) > [Computers](#)

Tags: [holder](#) [mount](#) [mining](#) [ssd](#) [m3](#)

I created this remix. Feel free to improve.

Changes to original:

- Removed SSD Holder text
- Added m3 screw holes and matching sunken m3 nut holes. This way you can nicely mount your SSD under the table or a shelf by drilling holes accordingly.

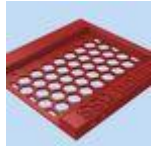

Possible use cases for this SSD holder:

- Mount operating system SSD underneath the self on your mining rig

Notes

- You will need M3x12mm screw minimum (depending on your shelf thickness and M3 (x4) nuts.

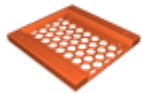

This remix is based on

SSD holder
