Summary

Colored base optimized for Bambu Labs AMS - Multicolor

[Toys & Games](#) > [Board Games](#)

Really loved how this game came out, my only gripe was the coloring of some of the items. I wanted to use the AMS to do the coloring, so the original embossed and de-bossed models didn't really work for me.

This is a simple remix to allow users to print multiple colors with an AMS on a single layer. I have also included orca slicer 3mf's with my settings as well as a "fancy" version that utilizes hilbertic curve and honeycomb infill. Play around with these and see what kind of cool combo's you come up with!

Huge thankyou to @Paulorfo the original creator of this model, great work!
