## Summary

Jun-Electron 7inch Touch Display Stand

[Gadgets](#) > [Computers](#)

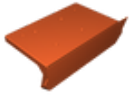

Tags: [raspberrypi](#) [lcdmount](#) [7inchdisplay](#) [junelectron](#)

I made a basic stand for the Jun-Electron 7" Touch Display that I bought on Amazon. I'm not a fan of the folio case stand it comes with so this will replace it. You can use it with the screen alone with your PC or whatever or attach a raspberry pi on the back. There are holes for standoffs and m2.5 screws. The screen itself is attached with the m3 thumb screws that come included but can be tricky to get in. I've had easier success with m3x8 cap screws as replacements. DO NOT OVERTIGHTEN

Link to the screen here: <https://www.amazon.com/Raspberry-Portable-Monitor-inch-Screen/dp/B08BC6BXXD/>

If your thumb screws wont reach try m3x8 screws as I've had success with these.
