This model can be used with IKEA LIVBOJ wireless chargers and different sizes of phones. The main objective of this design is to release the phone in the correct position for charge it, it's not needed to move the phone over the charger to find the charging point.

I've used two brass heat inset nuts for the adjustable height stand with 3mm screws in front face.

It's been printed with a nozzle of 0.6mm and 0.35 layer height without supports. You can print with different layers heights, nozzle sizes and materials.

If there is some problem with the model make a comment and I will try to solve it. Tested with Iphone 13 mini.

May you enjoy it.

PS: Added v2 version of base with rounded corners
