Wrist support towers for the Moonlander keyboard. When the Moonlander keyboard is tented, the wrist support is angled...

[Gadgets](#) > [Computers](#)

Wrist support towers for the **Moonlander keyboard**.

When the Moonlander keyboard is tented, the wrist support is angled such that it no longer supports the wrist comfortably.

These towers raise the wrist supports to a more comfortable angle.

Magnet slots are added so they can be attached to the magnetic pad on the underside of the wrist rests.

This makes them easily removable.

Alternatively they can be attached permanently with double-sided tape.

See the overview image for the various customizable parameters.

The parameter defaults (and the STL) are for a fully tented keyboard.

For other tenting angles, you need to play a bit with the different parameters to get a good fit.

You may also want to **raise the thumb cluster with some extra legs**.
