“The flames make this printer 33% cooler”

Created a vanity name plate for anyone looking to use it. This is for my enclosed modded MK3s/Bear thing, but will work for others. Requires an MMU to use.

Features an integrated brim (optional part) for people who print this in ABS like I did, it will force prusa slicer to pick the correct color for the outline of the plate. Also features a better name SD card punch out for filaments that don't bridge well, and a few “Easter Eggs”
