This is an (external) case for the [Ultimate 64 UserPort Adapter](#).

I didn't want to modify my original C64C case (by cutting extra holes, etc.) to install this port.

So I decided to run the cable through the existing cassette-port; which I don't use anyway.

The case has a stand which brings everything in an upright position; making it easier to exchange cartridges.

Its elevated placement also makes it easier to read the WiC64 display. ;-)

Note: You'll need two tiny screws to fixate the PCB.

Enjoy!
