A lamp cover for WS2811 12mm Pixels that I use to decorate my house for the festive period.

I print at 0.2mm layer height with a colour change at 10mm, I switch from black to natural PLA at that point which gives very nice light distribution.

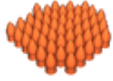

I print 50 at a time without a brim on the smooth plate and haven't had any failures yet.

The attached photos were with fuzzy outer skin turned on at default settings.
