Summary

Adjustable front sight for reximex rp/rpa

[Hobby & Makers](#) > [Other Ideas](#)

Tags: [airpistol](#)

A model based on idea introduced in <https://cults3d.com/en/3d-model/various/reximex-rp-rpa-front-sight> but using M3 heat insert and a hex grub screw.

After roughly figuring out sight height, unscrew it, put it on a threadlocker and screw it back in and fine adjust.

Typically threadlocker takes some time to set (and most take 24 hours to reach engineered hardness) so that should be enough.
