all parts made to fit the mega figure <https://www.printables.com/model/411733-mega-lego-like-minifigure-101-scale>

the parts were all a perfect fit for me on my neptune 4 pro so hopefully will be for everyone else. everything printed at 0.2mm and default 15%infill you can probably do less. no supports used

belt,buckle,boots,bow and socks designed by me nothing fancy. inspired by the original figure.

belt just slips over the body then the buckle is glued on. best to put on before the arms so you dont have to take them out again.

boots just slide over the bottom foot part of the leg and clip on.

socks just slip on like the boots only in one place because of the tapered side of the leg.

bow holder slips over the peg before you put the head on with the **bow** then glued onto it. print the holder in body colour so it blends in beard and hat is scaled to fit for the original <https://www.printables.com/model/329527-big-santa-lego-inspired>

This remix is based on

Mega Lego-like Minifigure (10:1 scale)
