### Summary

Round ice scraper with edges

[Hobby & Makers](#) > [Automotive](#)

Tags: [icescraper](#)

I made another form of a "round ice scraper". The faceted shape is not only interesting and aesthetic, but also gives additional convenience of grip in gloves, increases the rigidity of the structure and enhances the effectiveness of windshield cleaning.

Print with any hard plastic, 3-4 perimeters, line thickness 0.4, I think any one works. Bottom - 3-4, top - 3. For additional adhesion, breem is needed - 5-6 perimeters. No support is required.

V1\_1 has been updated. A round working surface is made on the inside. Thus, the outer part is designed for scraping thick ice, and the inner part is for thin ice.

I am waiting for your feedback and hope you like it!  
Bye!
