I watched a YouTube video about an ancient board game called Ludus Latrunculorum and decided to make my own. Printing with gyroid infill gives a nice cool wavy effect on the tiles. Game board is 7x7 tiles big where-as the original may of been 7x8 tiles or 8x8 tiles big.

Update: Created a 8x8 tile version that still fits a 220mm x 220mm build plate. I made a slightly smaller 22mm x 22mm token. Also, the new board allows you to play checkers.

I also flipped the board models upright.

Parts needed to print:

- 1 game board. Either the 7x7 or 8x8 board.
- 10 tokens for each player for a total of 20 tokens.
- Optional: Print 12 tokens for each player if you plan on also playing checkers.

This print will fit on a 220mm x 220mm build plate. No rafts or supports needed.
