I restore old radios as a hobby and I picked up a very nice sounding German table radio, but it was missing several push buttons and several of the remaining were degraded. Here are the 6 lower buttons. I did up the labels to their US/English interpretations though, so AU = Off, UW = FM etc.

I also included a blank template in sketchup format if you would like to modify or change the labels.

Now to find a resin printer, but these look pretty decent from my FDM.
