Simpel holder for a kids dyson vacuum cleaner.

I just used some double sided tape to mount it to a IKEA Kallax shelf. If you need screws I would recommend to use the Modifiers in PrusaSlicer or the slicer of your desire. (You can also write me a DM and I will release a version with screw holes but you will be much more flexible with the hole size if you do it in Slicer)

My Print Instructions/Settings

Orientation: Lying on the side. The bow should be on the print plate.

Supports: No

All other settings are as you wish, not really important.
