Summary

Car scraper, but when you're done, put it in the holder and water won't get into your car.

Tags: [holder](#) [3dprinting](#) [car](#) [truck](#) [scraper](#) [bus](#)
[carscraper](#)

Print on 0,08-0,12 layer hight with 0,4 nozzle, no support.

I would personally choose **PLA or PETG**, depending on whether you will have the scrap in the car all year or just for the winter.

You will need some velcro for drip holder (you will put it on back of the holder) to put it in trunk.
