I designed this rack to be screwed into the bottom of a shelf to save space compared to the original retail rack.

The informational strips with the paint colors and barcodes must be cut down in order to fit on the front.

Print 2 of each parts to hold all 30 colors. I glued each 7 and 8 pair together, but you could just mount them all without gluing if you trust yourself to keep the front flush.

They should be printable without supports if your bridging settings are dialed in.
