### Summary

A hook for attaching stuff to a childrens' balance bike.

Tags: [puky](#) [pukymoto](#)

My toddler always wants to have \$STUFF attached to and removed from his balance bike, so I designed this hook to fit to the parallel poles leading down towards the rear axle.

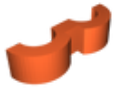

This is just the working prototype.

Planned improvements:

- Holes for screw and nut
- More refined fillet design
- Nicer transitions between hook and base
- Improved tolerances

I sliced it with an additional Generic Cylinder with 80% infill and just screwed the two parts together with a self-tapping screw.
