### Summary

Simple tool to evenly press down on the tube release clips on the A1 Mini tool head.

The tube release clips on the Bambu Lab A1 mini are notoriously difficult to press. So I designed this tool to help. I find that pressing the clip down with this tool, and gently rotating & pulling on the tube, will set the tube free.

There are two versions, an open-sided one and a closed one. The closed-sided one can be slid onto the tubing from the AMS side. The open-sided one can be used without doing that, but it may not press down evenly on the entire clip.
