this is a water diffuser. fill a bottle with lukewarm water and twist it on then you can pour it over your car window and it's unfrosted. **just make sure you turn your wiper on right away otherwise it will freeze right back on.** and don't put hot water in it because that can crack your window.

If you like it I would appreciate it if you give it a like. when you have printed it make sure you put a photo in "make". do you have any questions or comments? then put them in the comments. follow me for more. Thanks in advance and happy printing.
