You can buy these diffusers from me here!

If you like our models, consider giving us a 1 time donation!

Please see the assembly instructions photo!

This is a flashlight diffuser that distributes the light radially and downward to maximize the usage of the light through the diffuser. There is some assembly required using a glue stick, aluminum foil, and a knife.

Depending on your 3-D printer, you may need to scale the models a bit to get the lid to snap into the body reliably.

I print these out of PETG using a 0.4mm nozzle with 0.2mm layer height. Try as many colors as you can!

Make a glow-in-the-dark diffuser and set the D4V2 to lightning/beacon mode for maximum fun!
