Summary

A place to keep all your sway bars organized

[Hobby & Makers](#) > [RC & Robotics](#)

This was designed to fit two of every sway bar because the front and rear bars are the same. Since tolerances with 3D printing can vary a fair bit you may need to scale parts up or down to get the fitment just right. A little sanding on the edges where you might get little blobs from layer changes can help too.

Added a V2 that has a snap lid instead of relying on just an interference fit.
