Summary

A piggybank that looks like a Prusa Spool and upcycles your old, empty spool at the same time.

[Gadgets](#) > [Other Gadgets](#)

A nice piggybank to save some more money for that new printer or more filament. Requires an empty Prusa spool. It also blends in with all your other full filament spools so no burglar will find your savings.

Easy to print and to assemble:

Just print each part with the large side down to the printbed. You will need support for the money slot. Then just put a plastic half of an empty Prusa spool into each side and screw the spool together.
