### Summary

Friend had a door that was too thin and lock shank was bottoming out. This is a *\*very\** simple model to shim the door.

My friend had a door that was too thin for the default range and the lock shank was bottoming out preventing a good fit. This is a *\*very\** simple model to shim the door by 5mm. The rectangular cutout was actually trying to use less filament in order to prototype it, but since the prototype worked perfectly we kept it.
