Summary

This is a glasses holder that you can put on top of monitors that have around 1mm of bezel specifically Asus Pro Art.

I designed this glasses holder for monitors with a 1mm bezel. I use an ASUS ProArt Display PA279CV 27" for my office work and have two sets of glasses - one for regular use and one for computer use. I always forget to switch to computer glasses when working on the computer. So I made this for ease of switching between the glasses.

Printing instructions:

Please print the models in the orientations as shown in the last picture. It's modeled for PLA. For ABS/ASA or other materials that shrink, you might need to scale up the models by 0.5% or so. Otherwise the fitting will be too tight and you won't be able to assemble them.
