This is a simple key hook (with 3 or 4 hooks) that can be held in place with a standard light switch cover. You just place the part on the wall along with the light switch cover and screw the cover in like you've always done. The plastic switch cover will hold the hook in place securely.

Never loose your keys again! Just put them on the hooks when you enter the house and they will be right there waiting for you when you leave the house. Every house has a light switch near the entrance, so no more looking for your keys all over the place.

For those you like to modify the 3D files, I've included the native SolidWorks 2020 files. Enjoy!
