## Summary

A mounting solution for the PC under the desk

A PC mounting solution under the desk that I designed for my standing desk.

You will need two pairs of mounts. There are 6 screw holes in each set that can be used for stronger and more secure connection, but I think with a decent top on the desk you can use less screws. For me, with all 12 screws mounted, it's more likely to break the metalic band holding it than to rip off the supports.

I designed the pieces to use M4 inserts, but you can also use M5 screws and thread them directly in the plastic, as the force applied is not vertical with the weight of the PC.

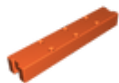

To hold the PC I used this 12x0.75 metalic band from the hardware store:

f3d file also attached to modify it to your needs and sizes. There is a parameter to control the case width
