Summary

Hands free when tying your next lure and keeping your pole and line safe from damage. Very handy wherever you are.

Great addition to your fishing gear. The hands free Fishing rod holder designed from the paddle holster idea. Very strong and comfortable to wear. Instead of placing your fishing pole onto the ground just place it in your holster for hands free line tying and putting on new bait or lures. This is a great way to keep from getting your fishing line tangled up and to prevent those devastating damaged poles while your at the lake. I have on many occasions stepped on my pole after placing it on the ground and i wont go anywhere without my Rod Holster.

Can be printed from almost all types of filament. Recommend 3 walls minimum and 25% infill. the printed example shown was made with the following settings.

PLA, 4 walls, 25% gyroid infill, 220 degree nozzle temp, 60 degree bed temp.

Print upside down with minimal supports

Change the setting to whatever meets your needs.
