## Summary

Best way to keep those google powered smart device switches from being powered off & instruct new folks how to proceed!

Do you have any google powered smart devices that can be easily turned off with the flick of a rocker switch?

I do and it is certainly frustrating when they are accidentally turned off!

Insert this handy fellow! This rocker switch cover prevents the switch from being accidentally turned off and has "Hey Google" on the front plate to instruct users how to use this device. The cover is secured to the switch cover with double sided tape and features flexible tabs so that you can still toggle the rocker switch (if needed).

Please note this design is intended specifically for rocker switches and was designed in this case for single switch applications.
