This filament guide is a fast (~10 minute) print that uses barely any material (~3 grams). It clips onto either side of the top of your SV06 (and maybe SV06+, but I haven't tried), and helps guide a Bowden tube to your extruder.

Just print, add a zip tie, clip it to the printer and you're set! Clips to either side of the printer.

I printed mine in PETG for flexibility and strength:

- 0.2mm layer height
- 2 perimeters on a 0.4mm nozzle
- 3 top and bottom layers
- 15% grid infill
- No supports are necessary, just print it laying on its side

STEP file included!
