### Summary

Fits my old sistema container where the clips are on the container rather than the lid

[Household](#) > [Kitchen](#)

Tags: [sistema](#)

Broke it this evening before making my kiddo his dinner, grabbed my trusty non digital calipers after dinner and banged this out. Printed mine with my standard PETG profile on my Voron 0.1 and it fit nicely. The dimensions match where they matter, it doesn't protrude above the lid of the container when closed. I didn't mimic the original part exactly as they were injection moulded and would have had curves that would not be conducive to bed adhesion or overhang requirements.

You'll need PETG or better if you dishwasher your containers, top shelf only. Don't need to be food safe as they make no contact with food, just keep the lid on.

No supports needed.
