Summary

helper for your fish tank snails to acclimate to the new environment

[Household](#) > [Pets](#)

This Item is for snail acclimatization. Place it a few mm beneath the water surface and than let your new snail friends explore the new habitat by them self.

I have 2 versions for 2 different suction thingies. version "a" is for the suction cup with flat end and "b" is with this round extension. see pictures for reference. I only printed version "a". If you print "b" please let me know.

If you need other sizes or for other suction cups, please let me know and I will see what I can do.

print instructions

- print in fish friendly material e.g. PETg
- use default print orientation from the model
- 3 perimeters

Because I used transparent PETg I played around with "[How To Print Glass](#)". Its a good object for that :-)

See also my other fish tank stuff: <https://www.printables.com/@Antimaterie/collections/973165>

Additional notes

I'm interested in your feedback to improve my stuff! So give me likes, post makes, comment and rate the print to show others and me how well it goes.

If you post a make, let me know which filament you use.

If you want to support me by donating a coffee go to <https://ko-fi.com/antimaterie> I would really happy about it. The money will be invested in all stuff regarding 3d printing to give more and better quality models.

In general my Prints are not for commercial use, but if you are a print farm owner and want to sell some of my stuff, please contact me.

Hope you enjoy my models.
