Hey :D this is my first project and the first STL file i have ever made and I am proud of me.

So this is a Ender3 Spatula holder for the left side and if you ask me, it is super easy to put this on the side, let me show you an example: Many holder are installed on the Z-Axis and if I want to print something high i probably have to move the holder and the handling is not that nice. And thats why I invented my own holder.

Have fun :)
