We made these 30/xx mm mockups as a cheap replacement for different lock cylinders for environments with low safety requirement like garden gates and others where you not neccessarily NEED a lock but don't want to see an eye-catching hole where the lock cylinder should be. It is cheaper to print this mockup than buying a cheap alternate cylinder (with even low safety requirement, too).

It has the exact dimensions of an original cylinder, fits very well and if printed in a GALAXY SILVER or another metallic material it looks really nice and real.

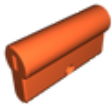

We will possibly put other lengths online soon but if you need an other dimension quicker please let us know.

Material: PLA/PETG

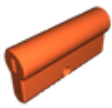

Layerheight: 0,2mm or better

Infill: 20%
