Welcome to GlennovitS3D. Join the Club on Printables.com to **support creation of new models**, get access to **exclusive models**, and get **commercial rights**, to sell your prints. **Join today - GlennovitS3D** - or check out my **model collection** or my **popular models**

This is just a **simple and quick** to print icescraper - print and toss it under the car seat to be ready for winter! With a nice textured handle, it's easy

to grip, even with gloves on! Such a minimalistic yet functional design can only be named one thing: MinimICE!

(Want a more 'futuristic' design, then maybe try this one):

<https://www.printables.com/model/660904-futuristic-ice-scraper-simple-yet-detailed-from-th>

Overview

The model comes in **4 sizes** - and all sizes in **2 styles**.

Sizes are defined by the width of the scraper 'blade':

- **75** mm
- **100** mm (the one on the photos)
- **125** mm
- **150** mm

The 3 styles are:

- **Solid** (can be printed with exposed infill if wanted)
- **Outline** (the one on the photos)
- **Outline (strong)** (as outline, but with a stronger handle)

Assembly

None - print → you are ready.

More practical prints? I got you covered! Check out this **collection of practical models** - everything from tools to storage solutions. Or maybe see this **collection of tool models**

Print instructions

- **Orientation:** All files should be printed as they are imported.
- **Supports:** No
- **Layer height:** 0.2 mm (or lower to get as smooth a blade as possible)
- **Walls:** If you choose the outline version, maybe increase the Walls count a little, to avoid tiny infill bits.
- **Top/Bottom layers:** Default 3-5 - or 0 if you want to show the infill of the Solid versions.

Happy printing!
