I found a way to generate topographic maps from saetlite data, then used prusaslicer 2.7 to emboss a track map on it that matches the curves of the hills in the area. the result is a 3d printable topographic track map The finish Line is located halfway down the left hand side of the map after an uphill section that was murder on my poor MG Midget when I did a track

tour. Poor thing wouldnt accenerate in 3rd up that hill, and certainly ran out of torque in 4th or 5th (datsun 5 speed conversion)

Print this out, relive some memories. share with your friends. It will look better if you have an MMU of some kind. I cant really make it a multi layer multi color print. It will look better painted at the very least.
