Summary

Modified bracket to fit my under desk mounting support

[Household](#) > [Office](#)

Tags: [caldigit](#) [caldigitts4](#)

I had been looking at [@JasonLang_99641 TS4 Brackets](#), but they didn't have enough vertical space for a desk controller + dock (under the controller), so I decided to create a mount to include the controller and offset the TS4 dock to under the controller.

So, as one should, I remixed his mounts to my liking. Modifications include:

- screw+nut “rails”, allowing some some depth adjustments
- bigger chamfers on the front of the mount
- compatibility with [my under desk mounting support](#)

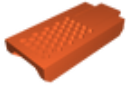

This remix is based on
