Replacement for Kingsong's S18 EUC rear panel.

Designed to be printed flat with a bendable trick from @teachingtech (<https://www.printables.com/model/556103-making-flat-but-bendable-models-with-a-slot-patter>) and assembled with connectors. PETG gave me good results.

There is room for some improvements and fine tuning of the model, but for me it is already enough and functional.

12/20/23 - updated the model, the previous one was a little bit loose to my liking. I changed the connector also, so there is no need to glue pieces. It's designed to be tight, so you may use some sanding if needed.
