updated 30. 11. 2023 | published 30. 11. 2023

### Summary

I needed to put two Ikea Lack tables onto each other. I had to put the upper Lack 12cm higher.

---

Printable on Prusa Mini, Ender 3, and bigger printers without any problem.

The .stl is a bit heavy but this is because the export is done in “super fine” mode :)

You can put M6 bolts in the holes in order to fix the tables to the height enhancer.

I have designed it with a hole in the middle part, because it is faster and cheaper to print.

You can print this part without any support ;) Enjoy !
