I created the Ugly Camera Hat because I did not like seeing the original camera hats brim in my feed. With this style the camera does not see the brim but it still helps with the glare.

Make sure to tilt as needed. See my photo.

Print Settings:

- Print with Supports
- Brim is optional
- ABS or some other high temperature resistance Filament. Although PLA may work as well depending on how hot your printer gets inside.

Note: The camera hats do help with the glare but to get the best results its probably best to add some extra lighting to the printer.
