IMPORTANT:

USE THE ZIP FILE ONLY! The print file doesn't work!!!

Here are the steps:

1. Home the z axis.
2. Make sure the nozzle just barely touches the bed at every corner.
3. Load up the filament.
4. Start the file.
5. Every time the print pauses, check the height of the small printed square.

6. If it is too squished, then lower the bed. If it doesn't stick or barely sticks, then raise it.
7. Repeat this until the file is done or until it is level
8. Done! It works like magic!
