A version of [@bogdanko's awesome display knob](#) for the Prusa Mini(+).

I just love the feel of these knobs and use them on all my printer displays.

I used supports to print this. Make sure you change the Contact Z distance in PrusaSlicer to 0.25mm to make it easier to get them out. It was still a bit of work with needle-nosed pliers but in the end the supports came off great.

I also used concentric infill for the top layers.

If you like what I'm doing...
