Summary

An insert for Pim B's Ikea Skadis Plant Painting which fits into the holder and can easily be taken out for watering.

I really liked [Pim B's Ikea Skadis Plant Painting](#) models and I really appreciated that he also included the Fusion 360 files for modification. I was not able to find any models that could be used as a planter insert for the container so I created one. I just learned Fusion 3D for this so please bear with me 😊

It's simply a planter that fits into the 3 connector plant pot with drainage holes which can be easily taken out and put back in.

I also included the Fusion 360 file for it so anyone more experienced can make adjustments.

Printing Instructions

As with Pim B's Plant Painting, print the insert with the drainage holes at the bottom with 3 perimeters/walls with 100% infill.

(I'm using a Creality Ender 3 V3 SE and I had to decrease my initial layer speed and increase the initial board temperature to 65 degrees celsius so that it would properly adhere when the drainage holes are being created. I also have **autobrim** set up as well.)

Updates

2023-12-11: Added model file for the 6 Connector Variant.
