### Summary

Blocking the wind should keep your Throttle-Thumb a little warmer :-)

This is just an experimental thing I came up with, because even with thin gloves, my thumb on the throttle soon got cold due to the wind in colder temperatures. So here is a thing you may want to try.

It simply snaps on the standard 22mm Handlebar from the KQI Scooter. You can rotate it to your needs. You may also adjust the Throttle itselfs. You can loosen the throttle with a simple allen key and rotate it, to where you want it to be.

I made two versions, one with the NIU Logo and one without any Logo. Please contact me, if the Model with the Logo is a problem - I will delete it then.

Have fun trying!
