You can glue a 10 x 1.5 mm round magnet in the base.

Print instructions

Recommended infill angle: **90°**

Low speed and high temperature will create a shiny top surface.

There are "holes" inside the model to make some of the top layers more uniform, and they were created with **0.2 layer height** in mind.

If your top surface is not flat & shiny and you see scarring, then make sure to check this guide: <https://bit.ly/2UtN0I1>
