This carb to air filter holder boot is designed to be used with Honda CT90K1's that have a stock 4 screw carb with an intake opening of approximately 36mm.

This has been printed with TPU which provides enough flexibility to allow it to be installed in the air filter holder. It is a very snug fit, but a little oil can help make things easier. A more flexible material would make for an easier installation, but the TPU has some basic oil and gas resistance.
