### Summary

Entirely redesigned Christmas tree that fits regular led tea lights.

A complete redesign of my previous Christmas tree, for use with regular led tea light (37x22mm for the base, the led flame is not an issue).

You can always scale a bit if needed, according to your tea lights. You can do this in your slicer by adding a cylinder the size of your tea lights to see how that fits.

I printed them in PLA, 0.3mm, 2 perimeters, 15% infill, no supports needed.

If you're going for the model with the pole star, you need to use 0.15mm layer for highest layers that include the pole star in order to get clean overhangs.

I also included a version with no holes to print in vase mode.

Merry Printing!
