Why have a normal sized drink container in the car when you can bring your giant 1/2 gallon jug that rolls around at every turn? Amiright?

I made this for me. Or for the kids. Well, for me... so I don't hear the jug banging on something as it rolls to one side of the car or another every turn I make.

Including the Fusion 360 model so you can have it fit your car, too. Or minivan. Those are the worst.
