my version of the antivibration foot sold by Bambu Lab for the X1 Carbon
printed in two parts to eliminate overhangs in TPU

just a few drops of super glue will join the parts

the foot is a press fit in to the bottom holes of the X1C (it may be a tight fit
but it will go in)

Added chamfers to the top to make it easier to fit them.

i don't have a P1P so can not say if it fits that too.

hop it helps

feel free to share, mod or whatever you want

Enjoy
